

IT OPERATIONS INCIDENT REPORT

MATRIX GROUP GLOBAL LLC • ENTERPRISE INFRASTRUCTURE LOG

Incident ID	INC-2026-101	Severity Level	P1 - Critical
Incident Title	Production API Cluster Degradation		
Reported By	David Miller	Role / Department	Senior Software Engineer (Engineering)
Log Date	May 30, 2026		

1. INCIDENT SUMMARY & OPERATIONAL IMPACT

The production API gateway cluster experienced a sharp drop in responsiveness, leading to a 35% increase in server latency for incoming B2B partner requests.

2. ROOT CAUSE ANALYSIS (RCA) PARAMETERS

A sudden spike in microservice inter-process calls flooded the internal connection pools, triggering resource starvation across the primary API nodes.

3. MITIGATION & RESOLUTION PROCEDURES

Applied traffic-shaping filters to limit concurrent unauthenticated requests and scaled up the active container instances from 4 to 8 to restore structural throughput.
